Age: 41 Y Sex: MHN: P21-04752

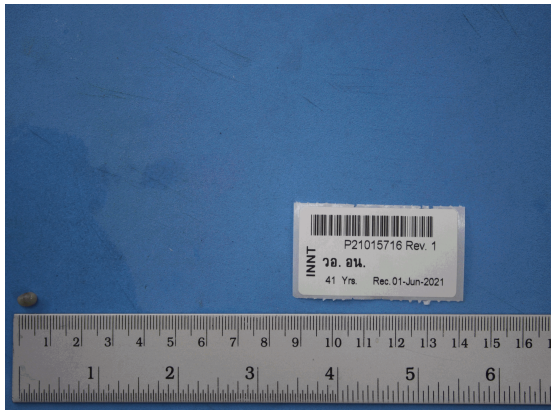

Ward/Clinic: Collected Date: 31-May-2021

Received Date: 01-Jun-2021 Reported Date: 04-Jun-2021

**Sample: Tissue from shaft of penis, biopsy**

**Report Type: Completed Report**

## Gross Examination:

The specimen is received in formalin, labeled with the patient's demographic data, an accession number and additional labeling "tissue from shaft penis". It consists of a piece of rubbery irregular gray brown tissue, measuring 0.6x0.3x0.3 cm. Cut surfaces show non-homogenous light brown tissue.

Entirely submitted, after bisection as A01 (II)

## Microscopic Examination:

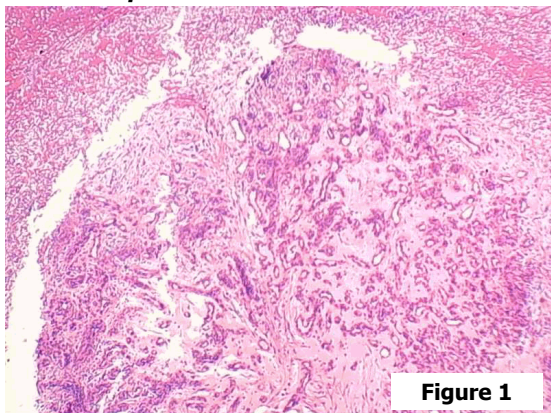

Figure 1

Sections show a polypoid lesion composed of lobules of numerous small capillaries lined by bland endothelial cells in the stroma. The overlying skin shows ulcerative lesion. The resection margin is not free from the lesion. No malignancy is identified.

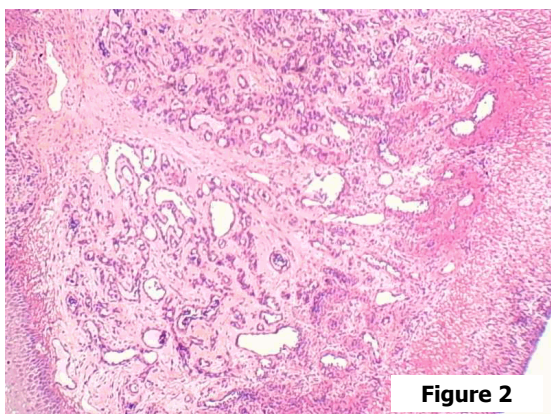

Figure 2

**Patho No. : P21015716**

**Hospital Lab No. : N/A**
