พริบตา คลินิก

Doctor: นพ.นิพัทธ์ ธีรตกุลพิศาล

Age: 46 Y Sex: F HN: P21-00541

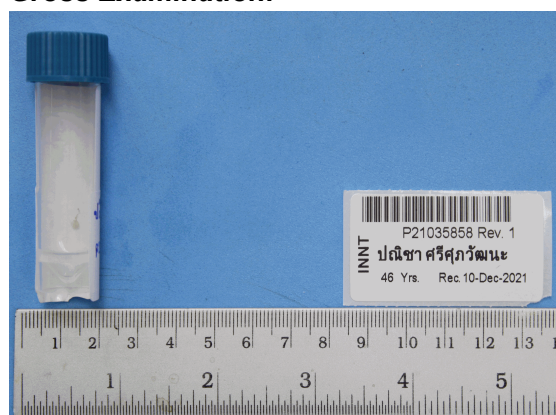

Ward/Clinic: Collected Date: 09-Dec-2021

Received Date: 10-Dec-2021 Reported Date: 14-Dec-2021

**Sample: Anal canal, biopsy**

**Report Type: Completed Report**

## Gross Examination:

The specimen is received in formalin, labeled with the patient's demographic data, an accession number and additional labeling "Anal biopsy". It consists of a piece of soft gray brown tissue, measuring 0.2x0.2x0.1 cm.

Entirely submitted as A01 (I)

## Microscopic Examination:

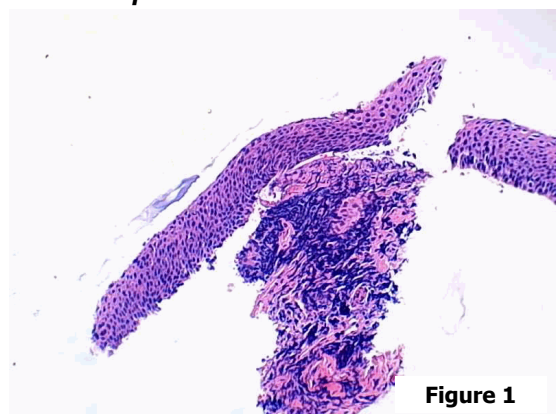

Figure 1

Sections show area of dysplastic squamous epithelium. It reveals large hyperchromatic nuclei with infrequent mitoses, involving nearly entire of the epithelium thickness. No invasive lesion is seen. No lymphovascular and perineural invasion is seen. Many koilocytes are seen. The stroma is infiltrated by many chronic inflammatory cells.
