Source: Anal specimen.

Test Method: Liquid-based preparation using Sure prep® Pap Test.

The 2014 Bethesda System

Specimen Adequacy: Satisfactory for evaluation.

Presence of columnar cells/transformation zone component.

Interpretation: Atypical Squamous Cells of Undetermined Significance (ASC-US).

Associated Finding: None.

Comment & Suggestion: According to the ASCCP Consensus Guidelines, ASC-US should either undergo repeat cytology at 1 year or HPV testing (Massad L S et al. J Low Genit Tract Dis. 2013 Apr;17 (5 suppl 1):S1-S27).

Note: The Pap test is a screening test for cervical cancer with inherent false negative results*
*The false-negative rates of Pap smear screening was 6.5%.
